

High quality repairs for portable devices

Equipment repair

We service a range of devices, including:

- ECG monitors
- Fetal monitors
- NICU monitors
- Oxygen analyzers
- Pulse oximeters
- Respiratory monitors
- Telemetry equipment
- Central stations
- Ultrasound systems
- Vaporizers

Simple process designed to save time

On receipt of your unit, GE engineers:

- Disinfect the device as required
- Diagnose performance issues
- Repair to factory standards
- Perform quality-control inspection and testing
- Securely package and return the item under the shipping terms you require

Quality repairs to optimize productivity

Our engineers have years of experience working on GE Healthcare devices as well as those from other manufacturers. Working in ISO-certified facilities with GE's widely recognized quality management tools, our technicians maintain exceptional standards so that the repaired equipment meets your expectations.

By providing on-demand access to quality repair solutions, we help you control downtime.
