

# High quality repairs for GE parts

## Parts repair

We service patient monitoring and diagnostic cardiology parts, including:

- Circuit board
- Transmitter
- Power supply

## Simple process designed to save time

On receipt of your damaged part, GE engineers:

- Disinfect the item as required
- Diagnose performance issues
- Repair to factory standards
- Perform quality-control inspection and testing
- Securely package and return the item under the shipping terms you require

## Quality repairs to optimize productivity

Our engineers have years of experience working on original GE OEM and OEM-certified parts and can repair parts for older models, helping you extend the lifecycle of your aging equipment. Working in ISO-certified facilities with GE's widely recognized quality management tools, our technicians maintain exceptional standards so that the repaired parts meet your expectations.

By providing on-demand access to top-quality repair solutions, we help you control downtime.
